ENTRY ACCESS SYSTEMS SOLUTIONS

OPEN OPTIONS ACCESS TECHNOLOGY

"Open Options' software and hardware has enabled us to maintain an access control system that is both user friendly and **extremely dependable**, all of which is critical given our environment."

-Director of Campus Security

DNA Fusion™ Access Control Software

DNA Fusion™ is powerful access control software designed with our unique InfoReady™ architecture, giving users the maximum options available with an easy-to-use interface. Through easy "drag and drop" technology and a multi-document interface, users no longer have to rely on complex systems to get the access control they need. At the core of DNA Fusion is the open platform that allows for simple integration into other systems and devices such as standard and IP video, intercom and audio systems, building controls, intrusion detection systems, personnel databases, and more.

Fusion Web Client™ Access Control Web Interface

Users can now access DNA Fusion™ remotely from virtually any web browser. Managing alarms, events, hardware, and personnel just got easier now that users can log in from anywhere in the world. Fusion Web Client™ is the perfect solution to ensure that your facility's system is operating properly when you are on the go.

OpenDX™ Personnel Data Exchange

OpenDX™ was designed to remove the time consuming task of manually entering data across various business systems and save users valuable time and resources. Data is easily imported into DNA Fusion™ from any valid data source. OpenDX™ provides an easy-to-use interface for configuring the data you want to transfer.

ENTRY ACCESS SYSTEMS SOLUTIONS

OPEN OPTIONS ACCESS TECHNOLOGY

"At Open Options, service is a main component. Each and every client is treated with great importance; no matter how big or how small. We strive to reach the top in both **quality of product and customer support** to provide the best in access technology."

Steve Fisher - CEO/President, Open Options, Inc.

Hardware Enclosures **Enclosed Products**

Open Options' enclosed products are ready-to-install panel enclosures that offer security integrators a complete hardware solution on all of their projects. A wide variety of configuration options are available to meet the needs of the open architecture system. Both the SSP™ Series and the Sub-controller enclosures are pre-wired for quick and easy installation. Using Enclosed Products not only eliminates costs associated with multiple parts and vendors, but also saves valuable time and resources by removing the complexities involved in the installation process.

PDU **Power Distribution Units**

The Open Options PDU is a professionally designed enclosure that supplies regulated 12 or 24 volts (VDC) to electric locks, control panels, sensors, or numerous other field devices. PDUs are available with either 8 or 16 fused power outputs and are available with either 12 or 24 VDC to meet your power requirements.

Open Options is a proud reseller of Mercury Security OEM Hardware products.

Portable Reader™ **Mobile Access Control**

Portable Reader™ is as simple as its name. It is used to badge people in and out from remote locations and stores transaction data to be downloaded and viewed later. Administrators can use Portable Reader™ to run reports of employees' in and out times as well as muster reporting. The Portable Reader™ is convenient, easy to transport, and provides a reliable, mobile badging source.
